

Chapter 1: INSTALLATION STOCKGAUGE FOR C-E-G FUEL GAUGE

 NOTE :

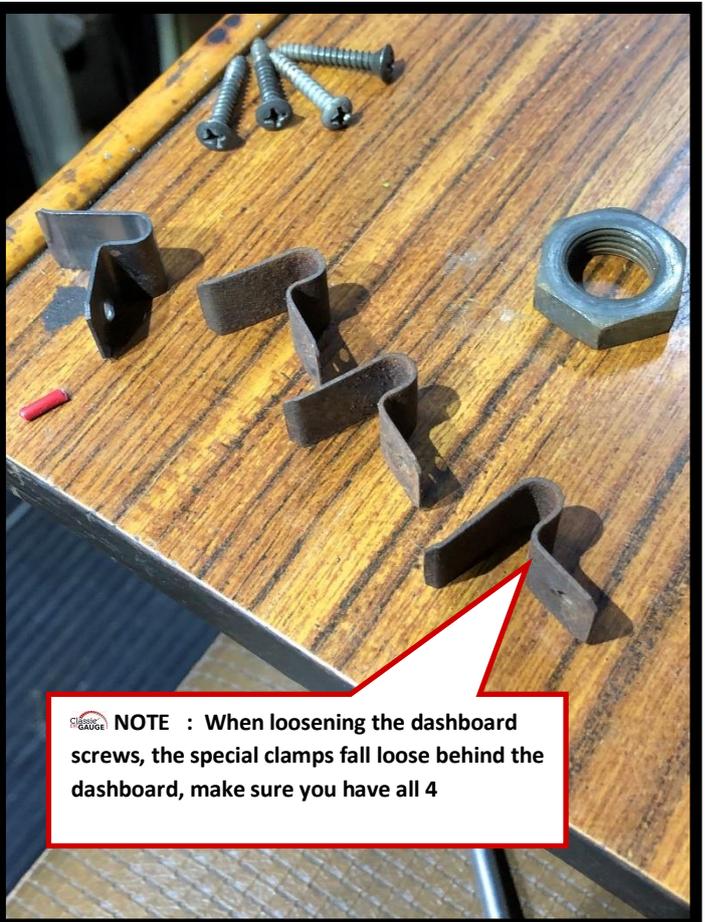

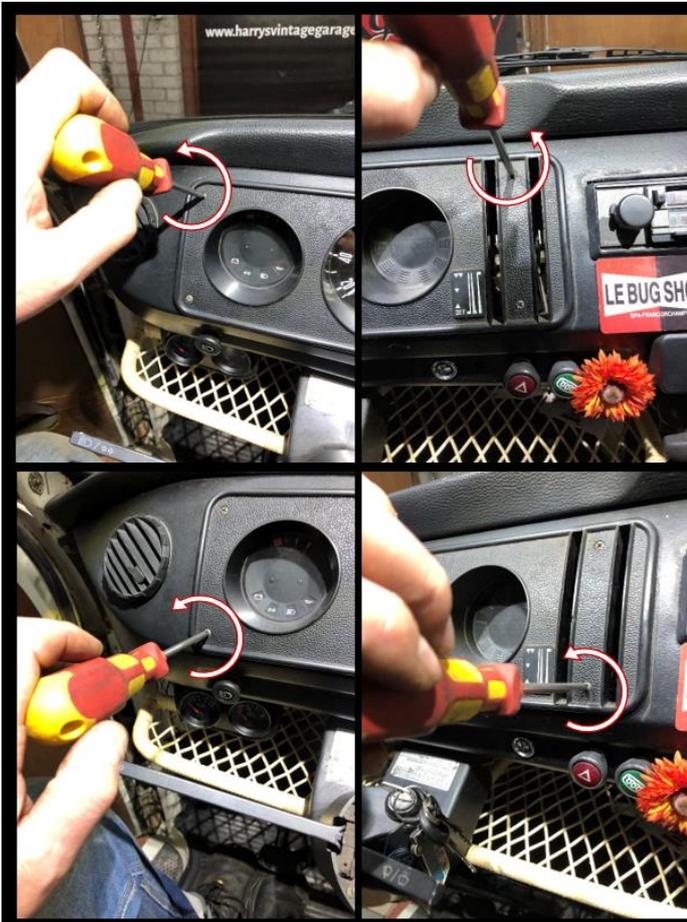

-  Before working on electrical systems ALWAYS disconnect the Battery Clamp FIRST

Loosen Final screw

Disassemble plastic housing

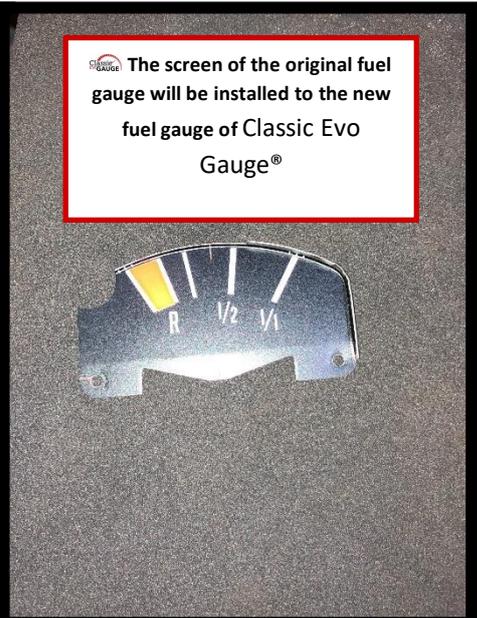

Remove the last 2 screws of the original fuel gauge with a 10 mm socket-wrench and remove the gauge

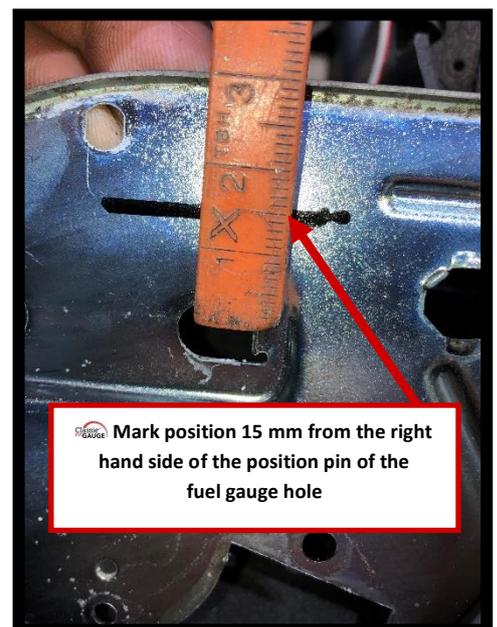

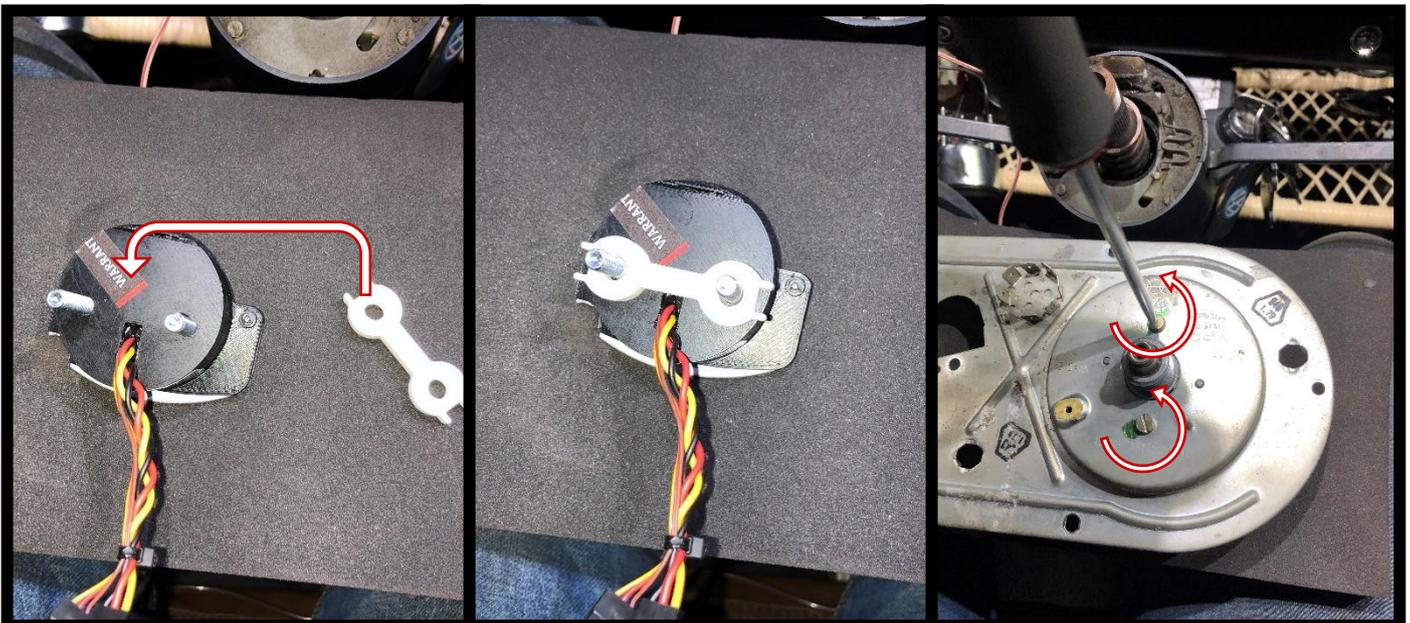

Turn the original fuel gauge over and gently file off the "crown" of the original rivets at the back with a small file

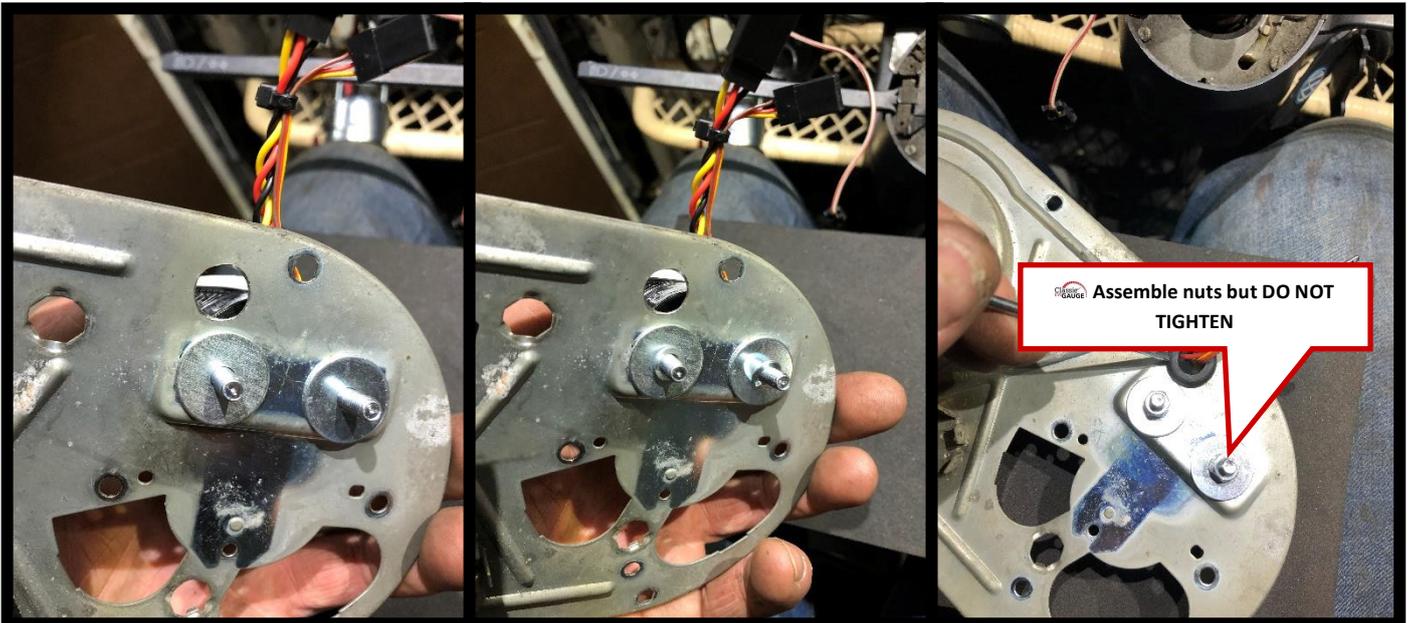

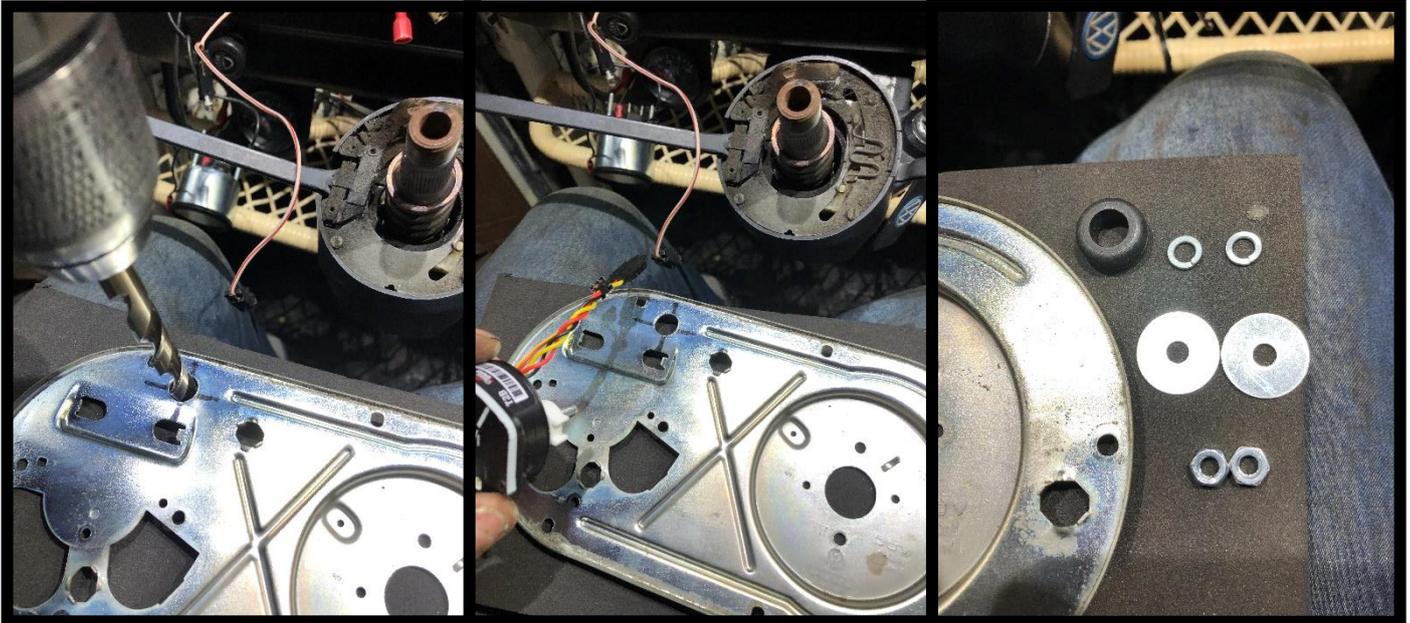

Now Gently!!!! Remove the screen of the original fuel gauge with a small screwdriver

The screen of the original fuel gauge will be installed to the new fuel gauge of Classic Evo Gauge®

Chapter 2 : installing and connecting the electronics

2 x three-color cables = control of the new fuel gauge motor

Black cable = ground

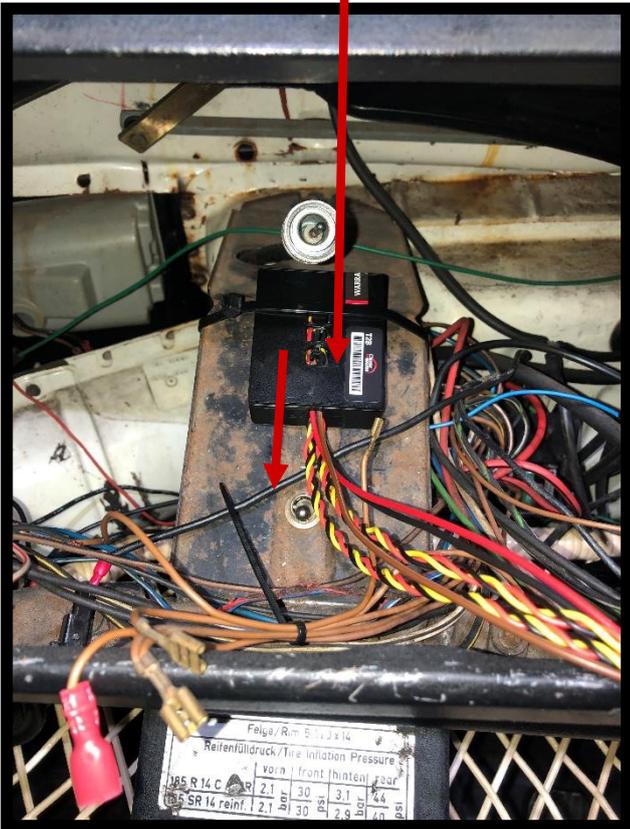

Red cable = contact switched +

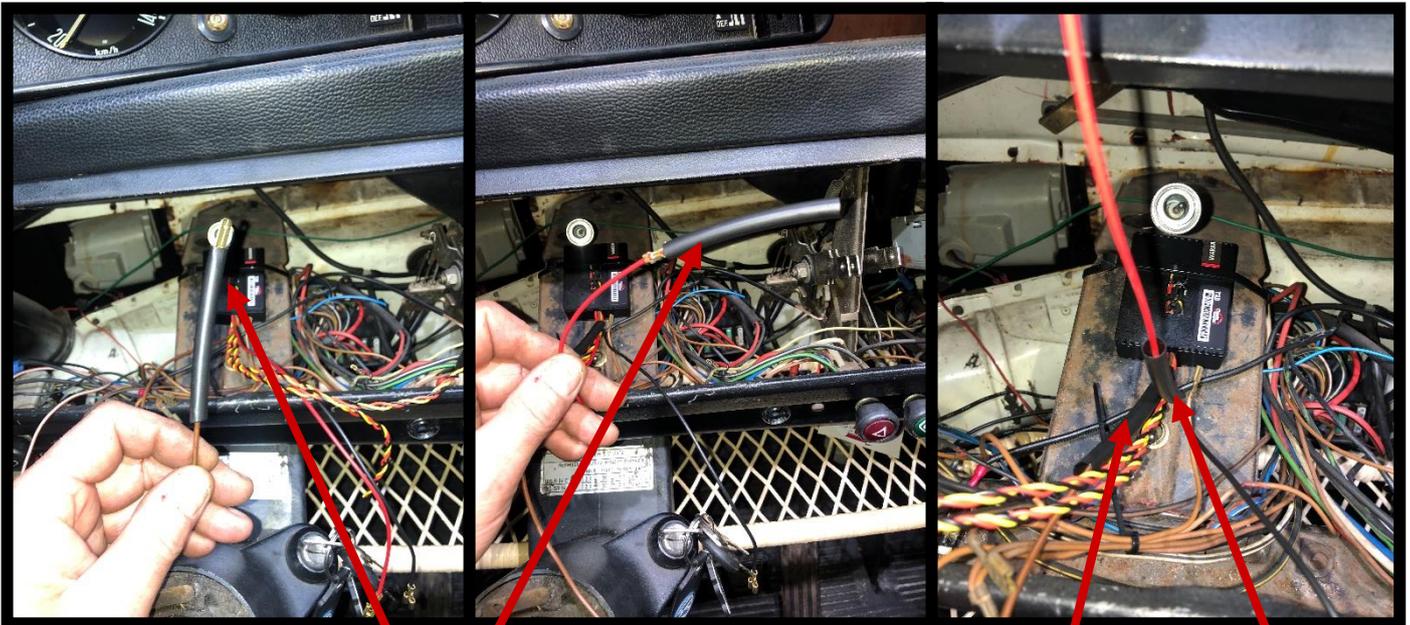

Brown cable = the cable to the fuel gauge floater

Install the electronics box on the „bridge“ under the counter unit as far down as possible. ATTENTION: install the box in such a way that the Switches are accessible from the left for LHD vehicles and right for RHD vehicles

Take the supplied heat shrink tubing out of the packaging

 Slide the heat shrink tubing over both the Brown and Red cables of the Classic Evo

Classic EVO GAUGE

 Connect the brown cable of the Classic Evo Gauge to the Brown/Black cable (this is the cable that goes from the float to the original gauge) of the car

 Slide the heat shrink tube over the cable shoes so that it covers all bare parts and shrink the tube with a heat source such as a paint stripper, lighter or gas burner

 Connect the Red lead of the Classic Evo Gauge to the Black lead (this is the switched ignition + of the original gauge).
 For correct installation, take the 2nd shoe on the original cable.

 Slide the heat shrink tube over the cable shoes so that it covers all bare parts and shrink the tube with a heat source such as a paint stripper, lighter or gas burner

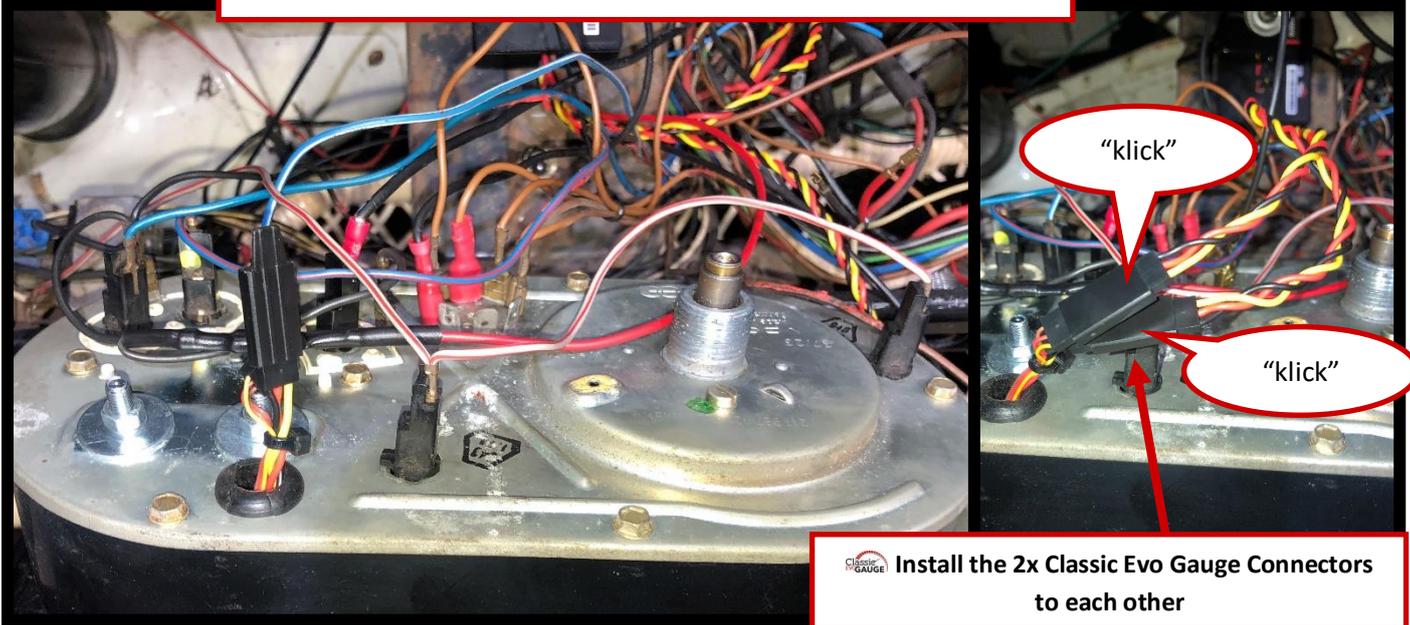

Classic EVC GAUGE

 Install all further cables in the correct position again

 Install the 2x Classic Evo Gauge Connectors to each other

 Install the last black cable of the Classic Evo Gauge to the ground block at the back of the counter unit of the bus

Programming first version of the CEG fuel gauge
Programmierung der erste version der CEG Tankanzeige
programming van de eerste versie CEG brandstofmeter

Chapter 3: Programming and calibration of C-E-G Fuel gauge on the existing tank float

Before programming, the battery terminal must be re-installed

Dip-switch : UP = ON , DOWN = OFF

Dip-switch 1 : „ON“ =Run Program 1 with led on „brightness LOW“

Dip-switch 2 : „ON“ =Run Program 2 with led on „brightness HIGH“

Dip-switch 3 : „ON“ = Learning mode float for : „TANK EMPTY“!!!!

Dip-switch 4 : „ON“ = Learning mode float for : „TANK FULL“!!!!

ATTENTION !!!! : for correct functioning, only one Dip-switch may be set to position „ON“ at any time

START-UP

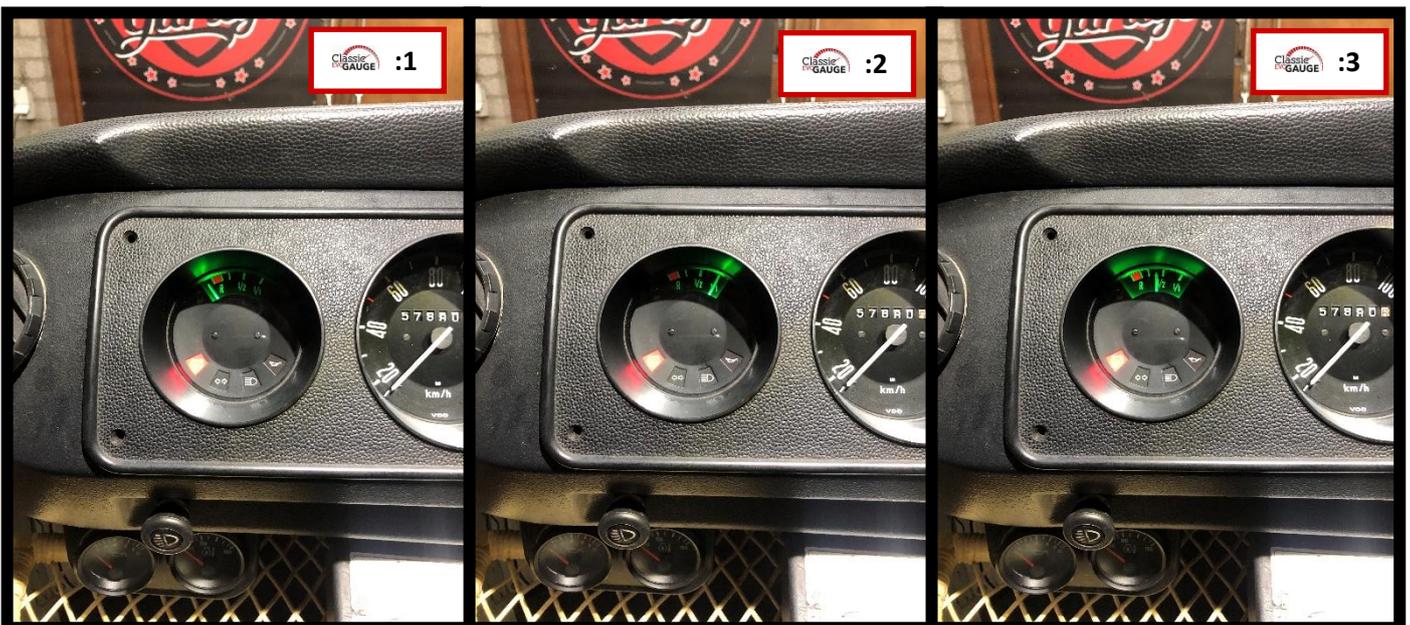

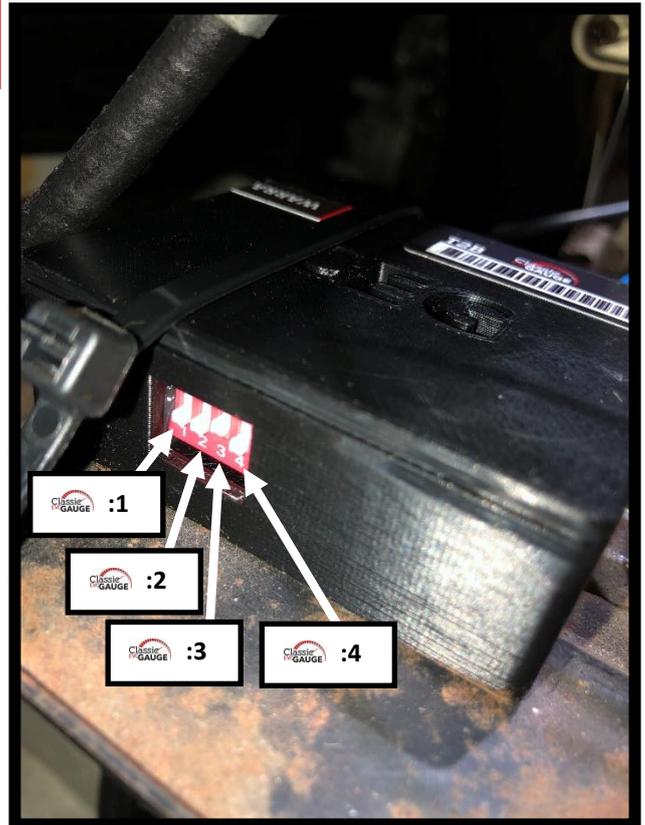

Start-up : Every time the car is switched on, the meter will complete its start-up phase, this goes as follows:

1: Pointer moves to the far left, followed by a led confirmation

2: then to the far right again followed by an LED confirmation.

3: Finally the pointer moves to the centre position followed by a double LED indication .. see below.

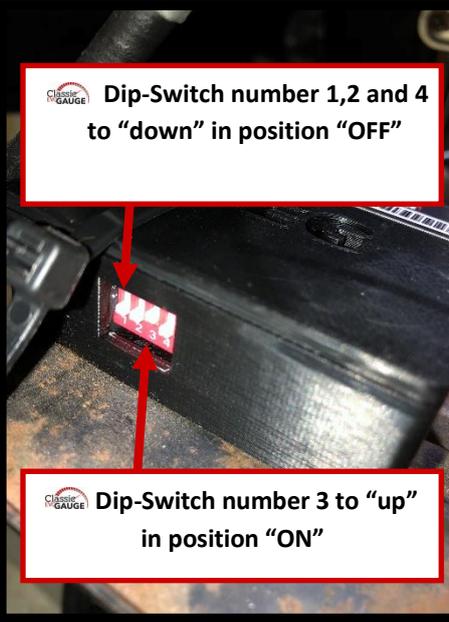

NOW the GREEN LED will go out, and the gauge pointer will move to the current fuel level (if programmed)

PROGRAMMING TANK POSITION "EMPTY"

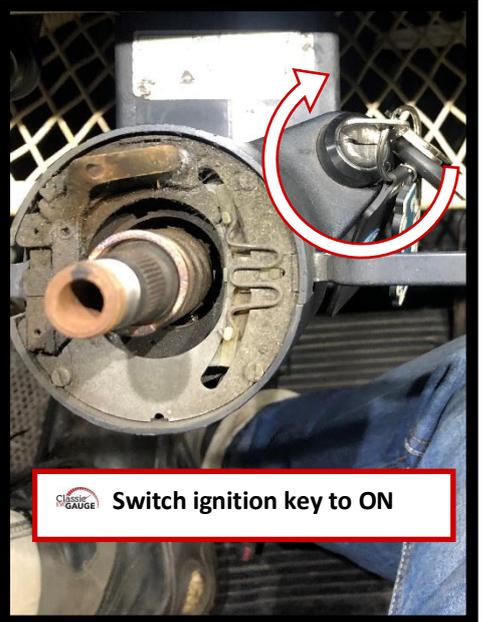

Classie EVO GAUGE Completely drain the fuel tank

Classie EVO GAUGE Dip-Switch number 1,2 and 4 to "down" in position "OFF"

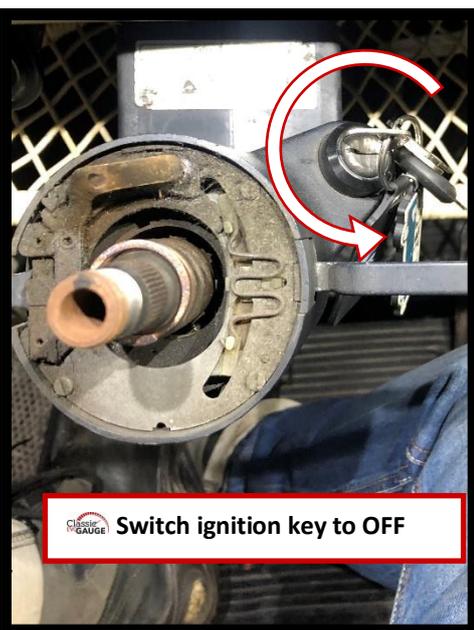

Classie EVO GAUGE Dip-Switch number 3 to "up" in position "ON"

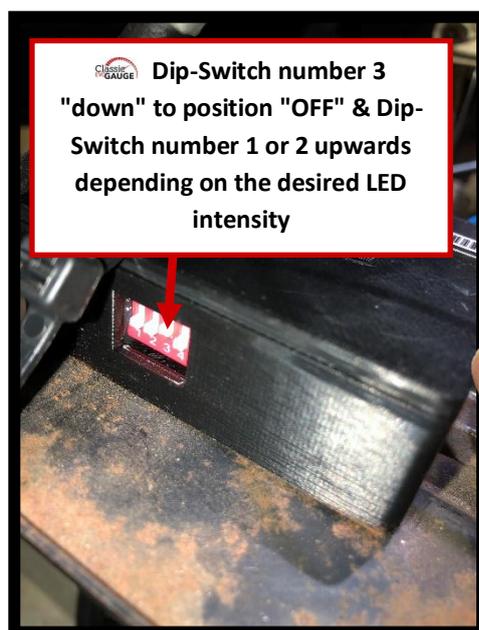

Classie EVO GAUGE Switch ignition key to ON

Classie EVO GAUGE The Classic Evo Gauge first starts the boot mode as described in the previous page, followed by reading the Float value, and a BLUE LED confirmation

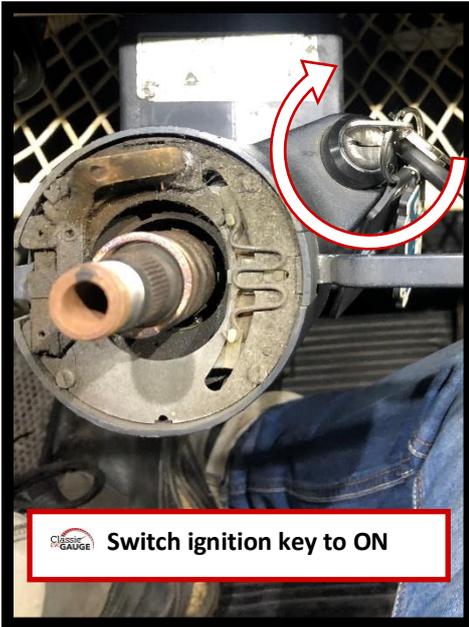

Classie EVO GAUGE Switch ignition key to OFF

Classie EVO GAUGE Dip-Switch number 3 "down" to position "OFF" & Dip-Switch number 1 or 2 upwards depending on the desired LED intensity

FILL FROM "EMPTY" POSITION + EXPLANATION RESERVE

Switch ignition key to ON

The Classic Evo Gauge works through the boot mode as previously described.
 With an Empty Tank (the end of the reserve) the face of the Classic Evo Gauge will glow Bright Red, and during filling the entire reserve the face of the Classic Evo Gauge will become

The dial of the Classic Evo Gauge will be orange the entire reserve

If the meter runs out of reserve, the dial of the Classic Evo Gauge will no longer give a LED indication

PROGRAMMING TANK POSITION „FULL“ !!!

In the Classic Evo Gauge , has a "base value" for mode "Tank Full" pre-programmed .this should be near to the correct full value.

At a next refuelling, „TANK FULL“ can still be read in, see below how:

9. Kalibratie Tank 1 vol (vlotter)

- Door het drukken op de bovenste of onderste knop zal de tanknaald of naar links of naar rechts bewegen
- By pressing the upper or lower button, the tank needle will move either to the left or to the right
- Durch Drücken der oberen oder unteren Taste bewegt sich die Tanknadel entweder nach links oder nach rechts

Adjusting the needle in the Fuel gauge

- Step 1 : Turn the Rotary switch to the desired setting
 Step 2: Use the upper or lower buttons to move the needle of the Fuel gauge to the correct position (Tank empty, full or reserve)
 Step 3: Confirm the setting with the middle (Enter) button in the correct position (led signal will confirm setting storage)

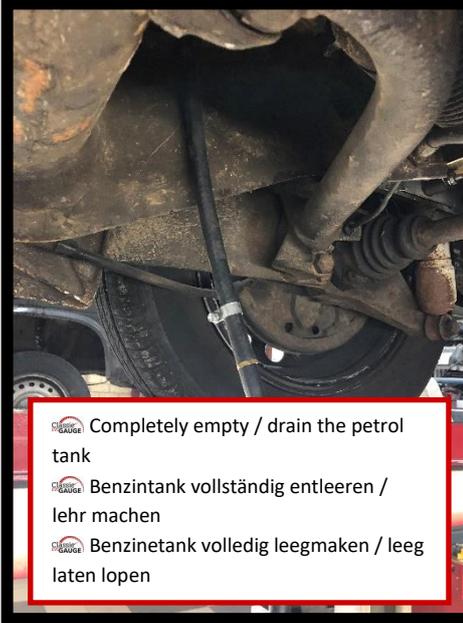

Einstellen des Zeigers im Tankuhr

- Schritt 1: Drehen Sie den Rotary Switch auf die gewünschte Einstellung
 Schritt 2: Bewegen Sie den Zeiger der Tankanzeige mit den oberen oder unteren Tasten in die richtige Position (Tank leer, voll oder Reserve).
 Schritt 3: Bestätigen Sie die Einstellung mit der mittleren (Enter)-Taste in der richtigen Position(LED-Signal bestätigt die Einstellungsspeicherung)

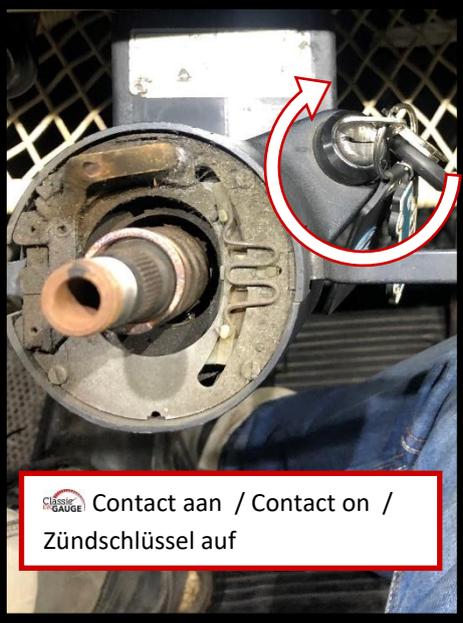

Afstellen van de wijzer in de teller

- Stap 1 : Draai de Rotary switch naar de gewenste instelling
 Stap 2: breng de wijzer van de tankmeter met de bovenste of onderste knoppen naar de juiste positie (Tank leeg , vol of reserve)
 Stap 3: bevestig de instelling met de middelste (Enter) button de juiste positie (led-sigitaal bevestigt instellingsopslag)

Wait until the needle is at the position of the "Full tank" and confirm the Full tank with the button in the middle (led signal will confirm setting storage)
Warten bis sich die Nadel in der „Tank Voll“ Position befindet danach den Voller Tank bestätigen mit der Taste in der Mitte (LED-Signal bestätigt die Speicherung der Einstellung)
Wacht tot de naald op de positie van "Volle tank" staat en bevestig de Volle tank met de knop in het midden (led-sigitaal bevestigt instelling opslag)

Congratulations !!!

You now have successfully installed your Classic Evo Gauge and calibrated it to your own Fuel Tank.

We at Classic Evo Gauge thank you for your trust and wish you a lot of fun with your purchase
